DESIGNER/ARCHITECT OKA  
ENGINEER Peritas

Works commenced on this design and construct project with full site excavation and installation of major civils, drainage and services to connect to the existing port infrastructure. The site, known as AREA C, was reclaimed land from the ocean, this has then been built over with engineered base and materials, varying 600 to 1200mm thick for the heavy-duty 60mm asphalt hardstand to cater for stacking containers, stacked up to seven high over the 17acre area. A new slip road and other entry exit areas were designed and built to ensure smooth truck and traffic flow continued through Rous Head and the facility.
